ICARE
TECHNOLOGIES

PRESS RELEASE

ICARE Technologies, creators of the intelligent ring AEKLYS, revolutionised the world of connected objects and finalised a fundraising of 2.5 million euros from ACG Management.

April 2016 - ICARE Technologies, Corsican Startup is developing an intelligent ring equipped with NFC technology that can replace: all payment cards, car keys, home keys and current contactless identification devices.

Completely autonomous and secured, this technological jewel fits to introduces new way of consuming in the digital market.

This new fundraising will allow the company to prepare the pre-commercialisation phase and will be in the market by March 2018.

In January 2017, an initial fundraising of €100,000 from angels business has been used for the development of the project. Several prototypes will be presented to market professionals next autumn and test phases will take place this winter. A new step to launch and commercialise the product in March 2018 to the public.

The startup is expanding and has chosen to establish its headquarters in Ajaccio in the same offices as another startup, Qwant Music, a new European search engine and another example of Corsican success.

More than a wish, a constructive approach, presenting talented people and entrepreneurship on their territory. Six specialists were recruited to work for the improvement and the launching of the ring.

*«Through our project and our experience, we want to show that Corsican business has everything to gain local and international recognition»
Jeremy Neyrou - CEO ICARE Technologies.*

THE INTELLIGENT RING "AEKLYS" ENTERS THE BIG LEAGUES

After the participation in a number of exhibitions: CES 2017 (Las Vegas), Viva Technology, "La Nuit Du Hack" and the "Paris Air Show of Le Bourget", the startup is expanded its network and making its revolutionary ring known as the biggest groups.

New prospects are emerging, new applications and areas of activity will be explored in the years to come.

ICARE TECHNOLOGIES. THE FUTURE AT YOUR FINGERTIPS

ICARE Technologies is the path taken by Jeremy and Fabien since 2012 to design an intelligent ring that will change the everyday lives of millions of people in a few years.

Precursors in the field, they have given themselves the means to convince the biggest international companies by showing their determination and their professionalism.

They knew how to make their idea a declinable and exportable product made in France that combines technology and simplicity.

Today, their efforts are rewarded by a fundraising (2.5 M€), giving them access to the upper stage.
After 6 years of development, the ring will arrive on the market in March 2018.

To meet the biggest ...

AEKLYS. INTELLIGENT RING. A jewel of Technology made in France

8 Patents

6 year of expertise

Sleek design & Intuitivness

Autonomous

Security systems

Everyday, Man comes into contact with his environment through his hands. Moreover, one of the recurring fears is related to the loss of essential objects in everyday life.

That's the reason why ICARE Technologies has developed an intelligent ring along with a smartphone app from where settings will be managed.

For safety reasons, this ring is equipped with several patented systems worldwide:

- Wearer identification
- Instant deactivation when taken off
- Data encryption in AES 256 bits
- Wave emission control

SECURITY & INNOVATION

All those safeguards make fraud and theft practically impossible. The ring has been designed to be worn permanently, the ring operates without any battery, it is totally sealed and the waves emitted by the components are not harmful to health. Users can have everything on them, all the time and safely.

«The objective is to allow total freedom of action on the environment, without any battery or network constraints.»
